

Amendment to the Abstract:

The Abstract has been amended. A revised Abstract is attached.

ABSTRACT

~~—In the case when large impact is applied during the installation operation of a disk apparatus, the reliability of the disk section cannot be secured by conventional disk section protecting methods.~~

A disk apparatus includes a disk section, a process, section, a disk start control device, and a disk start mode setting device. At the time when power ON operation is carried out, in the case (1) when the disk start mode setting means-14 device is set in the disabling mode, the disk start control means-13 device carries out control so as to start a the processing section 17 without starting a hard disk 12, and And in the case (2) when the disk start mode setting means-14 device is set in the enabling mode, the disk start control means-13 device carries out control to start the hard disk 12 and the processing section 17.
